

2014 Conference announcement

Eric Andres

Oroxcell Sas, France

Conference Series organizing **16th World Congress on Pharmacology and Toxicology** which is going to be held at **Bangkok, Thailand** in the month of **April 21-22, 2014** with a theme “Emerging new trends and findings in the field of Phamaracology and Toxicology”.

The aim of **Pharmacology Congress 2014** is review the new findings and advancements in the field of Pharmacology This event will be of special interest to any professional involved in health care domain, such as, pharmacologists, pharmacists, doctors will know more about the manufacturing of valuable drugs & health care devices etc. As many of the Scientists, Graduates, Post Graduates and PhD Scholars, students, health care professionals of any disciplines are having great opportunity to take part in this conference.

It will provide a platform for multidisciplinary exchange of information to accelerate the research findings and shed light on the significant scientific discoveries in all aspects of pharmaceuticals areas.

This field has a vast scope and its advancements which make many researchers and scientists to learn more about different aspects related to pharmacology and the development in the recent times.

Bangkok is a beautiful and a vibrant city with many tourist attraction places and it's a best place to explore.

Many of them will show interest in visiting the tourist spots which is also advantage for them.

Conference Series organizing 16th World Congress on Pharmacology and Toxicology (Pharmacology Congress 2014) which focuses mainly on the present development of drugs and its effect on health conditions. Pharmacology Congress 2014 will be to review the new findings and advancements in the field of pharmacology. This event will be of special interest to any professional involved in health care domain, such as, doctor's and nurse practitioner, manufacturers of different antibiotics and drugs and their effect on society. Pharmacology Congress 2014 will be organized with the theme “Emerging new trends and findings in the field of Phamaracology and Toxicology” on April 21-22, 2014 at Bangkok, Thailand.

As the pharmaceutical business is legitimately affected by the exploration directed with doctor prescribed medications, antibodies, and OTC medications being made dependent on discoveries from the investigation of life sciences. Clinical preliminaries are led to guarantee that items being created are tried on how well they take a shot at people influenced by the ailments or conditions they are made to treat. Pharmaceutical drugs are subject to a large number of laws and regulations that deal with patenting, testing, safety, efficacy and marketing and affect the size and growth rates of the market. Together with the high R&D costs involved in creating new drug solutions, these can act as barriers to entry for small companies. Be that as it may, pharmaceutical organizations produce both conventional and marked medications. Generics, which are copies of patent-expired drugs, are opportunities for smaller entrants. They are taking an increasing share of the market, particularly in developing economies,

where governments are encouraging their production in order to make lower-price treatments more widely available. Pharmacology integrates the knowledge of many disciplines, including medicine, pharmacy, dentistry, nursing, and veterinary medicine. This integrative nature allows pharmacology to make unique and significant contributions to human health. In the fields of medicine, biotechnology and pharmacology, drug discovery is the process by which new candidate medications are discovered. In 2014, the total global drug discovery market was valued around 35.2 billion U.S. dollars. It is estimated that the market will grow to some 71 billion dollars by 2025.

The conference focuses on the latest trends and advancements in treatment and development of new vaccines and drugs related to the specific health condition. The conference attendees will get fascinated with special events and speeches from the experts in various fields of pharmaceuticals and get an opportunity to gain knowledge with regard to the current emerging trends in this filed. It will provide a platform for multidisciplinary exchange of information to accelerate many disorders and shed light on the significant scientific discoveries in all aspects of Health sectors. Above all, it will be a meeting place to network and meet like-minded people in the field of Scientists, Adolescent Medicine, Health Care takers and Researchers.

Pharmacology Congress 2014 will provide an opportunity to young researchers through the initiatives like Young Research Forum, Poster Presentation and Scientific Meetings.

All papers to be presented in Pediatrics Congress 2014 will be published in Journal of Cardiovascular Pharmacology or World Journal of Pharmacology and Toxicology and Journal of Clinical & Experimental Pharmacology in regard to the topic with Unique DOI provided by Cross ref.

Conference Highlights:

- Advances in Pharmacological Research
- Drug toxicity and overdose
- Pharmacokinetics and Pharmacodynamics
- Toxicology
- Applied Pharmacology
- Clinical Pharmacology
- Neuro Pharmacology
- Environmental Pharmacology

Acquire the knowledge by attending the Speaker session entitled “Successful proof of concept of a micronucleus genotoxicity assay on reconstructive epidermis exhibiting intrinsic metabolic activity” by “Eric Andres” under the session “Toxicology”.

Supporting Journals:

- World Journal of Pharmacology and Toxicology
- Journal of Clinical & Experimental Pharmacology
